SECRET

INFORMATION REPORT ON THE PROGRESS OF THE WORK

The work of the Committee during the year 1947 has been devoted to the study of the various aspects of the problem of the control of atomic energy. The Committee has held a number of public hearings and has received many suggestions from the public. It has also conducted extensive research into the various aspects of the problem. The results of this research are set forth in the following report.

The Committee has found that the present system of control of atomic energy is inadequate and that it is necessary to establish a new system of control. This new system should be based on the following principles:

- 1. The control of atomic energy should be vested in a single authority.
- 2. This authority should be independent of the executive and legislative branches of the government.
- 3. This authority should be responsible to the people through a system of public hearings and a system of public reporting.
- 4. This authority should be given the power to regulate the production, distribution, and use of atomic energy.
